LATIHAN PERTEMUAN 4

Latihan 1: membuat halaman search page

```
1  import Icons from "@expo/vector-icons/Icons";
2  import { Platform, StyleSheet, TextInput, View } from "react-native";
3  import { color_list, styles } from "../styles/StyleApps";
4
5  export default function SearchBar({ value, setValue }) {
6    return (
7      <View style={styles.h_container}>
8        <View style={style_searchBar.search_container}>
9          <Icons name="search-outline" size={16} color="gray" />
10         <TextInput
11           autoFocus
12           placeholder="Search here"
13           value={value}
14           onChangeText={(text) => setValue(text)}
15         />
16       </View>
17     </View>
18   );
19 }
```

Latihan 2: Memanfaatkan reusable komponen

```
import { ListBook } from "../../constants/list_books";
```

```
const BookDataMemori = useMemo(() => {
  let computedData = [...books];

  if (search) {
    computedData = computedData.filter((listData) => {
      return Object.keys(listData).some((key) => {
        try {
          const value = listData[key];
          return (
            value != null &&
            String(value).toLowerCase().includes(search.toLowerCase())
          );
        } catch (error) {
          console.error("Error processing key `${key}`:", error);
          return false;
        }
      });
    });
  }

  setTotalItems(computedData.length);

  if (computedData.length > 0) {
    return computedData.slice(
      (currentPage - 1) * ITEMS_PER_PAGE,
      (currentPage - 1) * ITEMS_PER_PAGE + ITEMS_PER_PAGE,
    );
  } else {
    return [];
  }
}, [search, books, currentPage]);
```

```
return (
  <SafeAreaView style={styles.container}>
    <StatusBar barStyle={"dark-content"} />
    <SearchBar value={search} setValue={setSearch} />
    <ScrollView style={{ flex: 1 }}>
      <BookCollection books={BookDataMemori} />
      {totalItems > 0 && (
        <PagingComponent
          total={totalItems}
          itemsPerPage={ITEMS_PER_PAGE}
          currentPage={currentPage}
          onPageChange={(page) => setCurrentPage(page)}
        />
      )}
    </ScrollView>
  </SafeAreaView>
);
```
